3 - Reimbursement rate is county specific (Rural vs. Urban)

Health Connect America
Community Based Services – Service Descriptions
July 1, 2025 – June 30, 2026

Intensive In-Home Services: Services for children/adolescents under the age of 21. Services are intensive, time-limited interventions provided typically but not solely in the residence of a child who is at-risk of being moved into an out-of-home placement or who is being transitioned to the home from an out-of-home placement due to documented clinical needs of the child. These services provide crisis treatment, individual and family intervention and communication skills (e.g. to assist the child and his parent to understand and practice appropriate problem-solving, anger management, and interpersonal interactions, etc.) and coordination with other required services. Services also include 24-hour emergency response.

Supportive In-home Services: Support and other structured services provided to strengthen individual skills and provide environmental support for individuals with behavioral/mental health problems. Services are based on the needs of the individual and include training and assistance.

Family Centered Treatment: Family Centered Treatment (FCT) is an evidence-based and well-supported trauma treatment model of home-based family treatment. The primary utilization of this service is for stabilization of the family/prevention of removal from home and reunification should a youth be placed in foster/kin/congregate care. Applying practical, experiential, and common-sense solutions, FCT is designed to increase family health and well-being, promote attachment and resiliency among members, and develop functional solutions for maladaptive patterns (behavior). FCT builds upon family strengths and addresses individual and family trauma by addressing underlying causes, not just the symptoms. Link to Title IV-E Prevention Services Clearinghouse Website [Family Centered Treatment® \(FCT\) \(hhs.gov\)](https://www.hhs.gov/family-centered-treatment)

Mental Health Skill-Building Service: A training service for individuals with significant psychiatric functional limitations. Services are designed to train individuals in functional skills and appropriate behavior related to the individual's health and safety, activities of daily living and use of community resources, assistance with medication management and monitoring health, nutrition, and physical condition. These services are intended to enable individual with significant mental illness to achieve and maintain community stability and independence in the most appropriate, least restrictive environment.

Parent Coaching & Mentoring: Prevention service to empower caregivers with the knowledge and tools to parent effectively and with confidence while maintaining a healthy, nurturing relationship with their child. During home-based sessions, staff model parenting skills, role-play parenting techniques, facilitate opportunities for caregivers to practice healthy parenting strategies, and tailor interventions to meet the needs of each caregiver. Not therapy, but rather a form of guidance and support, helping parents navigate the complexities of raising children, specifically during times of transition and turbulence.

Therapeutic Mentoring: Therapeutic Mentoring is available to all school-aged children under the age of 21. Transitional specialists focus on life skills proficiency, anger management, social skills training, leadership, and academic support. Included in this category are Casey Life Skills (CLS) assessments and related services. This service can be considered for work with the special needs' population, including autism. This is a 1:1 service.

Therapeutic Relief: Emergency relief staff are dispatched on short notice to provide adequate supervision for children/adolescents needing assistance for up to 30 days. Full 24-hour supervision is also available. Additional relief staff may be utilized for children/adolescents who may exhibit highly aggressive behaviors.

Specialized School Support (1:1): Provided by a QMHP level staff in the classroom setting, services include individualized support with classroom support to decrease disruptive behaviors, crisis intervention, processing of maladaptive behaviors, development of prosocial skill development in the classroom setting, ADL skills, as needed, for students struggling with independence, and assistance in transition between classes. Minimum of 2 hours per day.

Head Start Observation: Clinical observation of a classroom where the teacher(s) have noted difficulty in managing specific students or groups of students. Includes provision of recommendations for each student in question and recommendations provided to the Head Start Supervisor of classroom management that may improve potential client response to situations. Completed by an LMHP or RIC/SW-S. Includes 2 hours billable time for the observation and paperwork. Note: Mileage is calculated as 1 mile = 1 minute for billing purposes.

Supervised Visitation: Supervised visitation is one-to-one supervision where staff ensure the safety of the children and all visitor(s) as well as provide basic information to help facilitate parent/child interactions by offering minimal suggestions, such as age-appropriate developmental expectations and interventions. Report provided.

Transportation: Staff are matched with clients, according to their needs. As transportation cases vary with each client (depending on distance and all variables involved), charges are a flat hourly rate to and from destinations.
